## 2024\_28\_III\_OOPS Using Java Lab

## 2028\_REC\_OOPS using Java\_Week 5\_Q2

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

### **Section 1 : Coding**

#### **1. Problem Statement**

You are working as a developer for CityBank, which wants to build a basic account management system.

Each customer at the bank has:

An Account Number (integer)  
A Customer Name (string)  
An Initial Balance (double)

The bank allows two types of transactions:

Deposit – increases the balance.  
Withdrawal – decreases the balance only if enough funds are available.

If the withdrawal amount is greater than the balance, the withdrawal should not happen, and the balance should remain the same.

You are required to implement this system using:

A class with attributes for account details. A constructor to initialize account details. Setter methods to update details if needed. Getter methods to retrieve details. Objects of the class to represent customers.

Finally, display each customer's account details after all transactions.

### ***Input Format***

The first line of input contains an integer N, representing the number of customers.

For each customer:

- The next line contains the account number (integer).
- The following line contains the customer name (string).
- The next line contains the initial balance (double).
- The next line contains the deposit amount (double).
- The next line contains the withdrawal amount (double).

### ***Output Format***

For each customer, print the details in the following format:

1. Account Number: <account\_number>
2. Customer Name: <customer\_name>
3. Final Balance: <final\_balance> (rounded to one decimal place)

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 1

1234

Rahul Sharma

5000

2000

3000

Output: Account Number: 1234

Customer Name: Rahul Sharma

Final Balance: 4000.0

### Answer

```
// You are using Java
import java.util.Scanner;

class BankAccount {
    // Attributes
    private int accountNumber;
    private String customerName;
    private double balance;

    // Constructor
    public BankAccount(int accountNumber, String customerName, double
balance) {
        this.accountNumber = accountNumber;
        this.customerName = customerName;
        this.balance = balance;
    }

    // Setter methods
    public void setAccountNumber(int accountNumber) {
        this.accountNumber = accountNumber;
    }

    public void setCustomerName(String customerName) {
        this.customerName = customerName;
    }

    public void setBalance(double balance) {
        this.balance = balance;
    }

    // Getter methods
    public int getAccountNumber() {
        return accountNumber;
    }

    public String getCustomerName() {
        return customerName;
    }
}
```

```
public double getBalance() {
    return balance;
}

// Deposit
public void deposit(double amount) {
    if (amount >= 0) {
        balance += amount;
    }
}

// Withdrawal
public void withdraw(double amount) {
    if (amount <= balance && amount >= 0) {
        balance -= amount;
    }
}

// Display account details
public void displayDetails() {
    System.out.printf("Account Number: %d\n", accountNumber);
    System.out.printf("Customer Name: %s\n", customerName);
    System.out.printf("Final Balance: %.1f\n", balance);
}
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int N = sc.nextInt(); // Number of customers
        sc.nextLine(); // consume leftover newline

        for (int i = 0; i < N; i++) {
            int accNo = sc.nextInt();
            sc.nextLine(); // consume leftover newline
            String name = sc.nextLine();
            double initBalance = sc.nextDouble();
            double depositAmt = sc.nextDouble();
            double withdrawAmt = sc.nextDouble();

            // Create account
        }
    }
}
```

```
        BankAccount customer = new BankAccount(accNo, name, initBalance);

        // Process transactions
        customer.deposit(depositAmt);
        customer.withdraw(withdrawAmt);

        // Print details
        customer.displayDetails();
    }

    sc.close();
}
}
```

**Status : Correct**

**Marks : 10/10**
